D_{22}
D_{66}
(b) Why κ is not the answer
κ would remove a factor of 20, leaving 42 — still a rejected model. Measured, reported, NOT applied.
10^4
830
42
1
eq. (3) verbatim (used)
with κ (not used)
a correct noise model
(c) Are the residuals the size the model says?
whitened residuals
$\mathcal{N}(0, 1)$, what the model predicts
observed s.d. = 27.8
predicted = 1.0
